Paiflow

STELLAR TESTNET

Quick Test

Thanks for helping test Paiflow. Five short tasks, four screenshots and a survey — no coding, no crypto wallet, and nothing to record.

~25 min	5	₱125	+₱75

OPEN THE SURVEY ↗

BETA.PAIFLOW.XYZ · ALPHA ROUND · GROUP B

WELCOME

Before you begin

This takes **about 25 minutes**. You don't need to know how to code, you don't need a crypto wallet, and you don't record anything.

What you do: five short tasks, four screenshots, and a survey you answer as you go. The completed survey and the screenshots make you eligible for the **₱125** incentive. An optional bonus at the end adds **₱75**.

What you need: a laptop or desktop with **Chrome** or **Brave**, your phone, the username and password we sent you, and a **Google Drive folder** for your four screenshots. Make it now: New folder → Share → General access: **Anyone with the link** → Viewer → Copy link. Any other shared folder that opens without signing in is fine too.

OPEN THE SURVEY NOW

Open it in its own tab and keep it open: forms.gle/s5D1R8xVnN6X4N338. Its first section just asks your name — enter the name we sent your test account to, and leave the tab there. Each task tells you when to switch back to it. Don't close that tab until you've pressed Submit — an unfinished survey isn't saved.

WE ARE TESTING PAIFLOW, NOT YOU

Most of this guide deliberately doesn't tell you where to click. If something is confusing, that is exactly what we need to hear — write it down and move on. There are no wrong answers.

TESTNET ONLY

Everything here runs on Stellar testnet. Testnet money is free and worthless. You will never be asked for real funds, a card, or a seed phrase. If anything ever asks you for one, stop and tell us.

WHAT WE RECORD

If any of it concerns you, contact us before you start.

- **Usage analytics, sent to PostHog:** which buttons and screens you reach, and where errors appear. Events are tied to your test account's internal ID, not your name.
- **Your screen is not recorded**, and neither are your face or voice.
- **Your survey answers** are stored in Google Forms and read by the Paiflow team. So are your screenshots, which show whatever is on your screen — close anything private before taking one.
- **Only if you do the optional bonus:** the public address of the wallet you connect, the transaction hash, and your IP address at the moment you connect are recorded and linked to your test account. We never see or store a secret key.

20 minutes, four tasks

B1 First impression · 2 minutes

1. On your laptop, open beta.paiflow.xyz.
2. Look at the page for **ten seconds. Don't scroll, don't click.**
3. Take a screenshot.

   `SHOT` `B1-homepage` — the page exactly as you saw it, before scrolling.

4. Switch to the survey and answer **section B1** now, before you look at anything else.

Sign in · 1 minute

1. Back on the page, click `Build a flow`.
2. Enter your **Username** and **Password**, then click `SIGN IN`.

- [ ] You land on your dashboard (“Your flows.”).

B2 Read a flow · 3 minutes

1. Click `NEW FLOW`, name it **Shop**, and click `CREATE FLOW`. The builder opens with an example flow already on the canvas.
2. **Don't change anything yet.** Look at the screen and work out: when money arrives, who gets paid, and how much each?
3. Answer survey **section B2**.

B3 Make it yours · 8 minutes

Here is the situation. There are no steps — do it however makes sense to you.

THE SITUATION You run a small shop with a business partner. Customers pay you in **XLM**. Whenever a payment arrives, **60% should go to you and 40% to your partner**. Nobody else gets a share.

Change the **Shop** flow so it does exactly that, **by hand**: the **Ask AI** panel and its suggestion buttons aren't part of this round. Keep every payout on **Crypto (wallet)**. Use these two addresses:

```
You           GAS4J4X5VR7TYWGD5CLVIFMIHDAOAJZYAOA7KPVHKYS5XWSTMUZBC25K
Your partner  GBPL3PMLOWFYARP6OL2H6HIFMLS5Q7ZWUMNKTIDPBK4REPXLZOMY2XSP
```

You're done when the `DEPLOY` button at the top is no longer greyed out. Then:

1. Click `DEPLOY`. A review page opens.
2. Read the review page. **Stop there — do not press DEPLOY TO TESTNET.**

   `SHOT` `B3-review` — the review page, with the English Preview sentence and the TESTNET chip in shot. If you never got this far, screenshot the builder where you stopped.

3. Answer survey **section B3**.

Give yourself eight minutes. If you aren't there by then, stop anyway and tell us where you got stuck — that is a useful result, and it doesn't affect your incentive.

> **STUCK FOR MORE THAN THREE MINUTES? READ THIS HINT — THE SURVEY ASKS WHETHER YOU DID**
>
> - Click a block on the canvas to open its settings.
> - Both blocks have an **Asset** setting. The example uses USDC; the shop is paid in XLM.
> - The **Split** block lists its recipients. Each one has an address, a share and a label, and the shares must add up to 100%.
> - While something is wrong, a button at the top shows the number of errors. Click it to see them.

B4 The customer's side, on your phone · 3 minutes

A flow like yours gives you a page to send to the people who pay you. Here is one we made earlier. **Scan each code with your phone's camera** — or tap the link if you're reading this on your phone.

1 · The pay page

Open the pay page

Look at it as if a shop had just sent it to you. **Don't pay anything** and don't install anything.

2 · The live page

Open the live page

Scroll down to **Live events**. Ignore the red "Authentication required" box and the missing QR image — both are already on our list.

SHOT `B4-phone` — the live page on your phone, with the Live events rows in shot. Upload it from your phone's Drive app, or send it to yourself first.

Then answer survey **section B4**.

B5 Change a swap on your phone · 4 minutes

Still on your phone. This time you open the builder itself.

Sign in on your phone

beta.paiflow.xyz

Scan the code or tap the link, tap `Build a flow`, and sign in with the same username and password.

1. Open the flow called **Swap XLM to USDC** — it was already on your dashboard — and tap the **Swap** block.
   - [ ] Its settings slide up from the bottom of the screen, and you can still see part of the canvas above them.
   - [ ] The row with **DEPLOY** and the flow's name fits on one line, and the flow's English sentence is folded away behind a small arrow instead of filling the screen.
2. Tap **Max slippage (%)** and change it to **2**.
   - [ ] The field stays in view above your phone's keyboard, and the page doesn't zoom in.

   SHOT `B5-phone-swap` — the Swap settings open on your phone, showing Max slippage.
3. Scroll down the settings, tap **Advanced** to open it, then close the settings with the X at their top. Don't deploy anything from your phone.

Then answer survey **section B5**.

Finish the survey · 5 minutes

Put `B1-homepage`, `B3-review`, `B4-phone` and `B5-phone-swap` in your Drive folder. Answer the last section, **About you and overall**, paste the folder link into its final question, and press **Submit**.

₱125 once we've received your completed survey and your four screenshots

An honest “I couldn't finish B3”, with a screenshot of where you stopped, counts exactly the same as a perfect run. We match your answers to your test account by the name in the survey's first section, and we'll reply about the incentive on the message this guide came in. Please leave everything else in the app alone: other block types (apart from the Swap block in B5), **Dev mode**, and the Profile page aren't part of this round.

Thank you!

Twenty-five minutes of somebody's real attention is the most useful thing we get.

+₱75 Optional bonus

About 25 more minutes: install a test wallet, deploy your Shop flow, and pay it once. Do this **after** submitting the survey.

1 Install Freighter and get free testnet XLM

1. Install the Freighter wallet extension in Chrome or Brave and pin it to your toolbar.
2. Open Freighter → **Create new wallet**. Write down the recovery phrase somewhere safe.
3. In Freighter, open the network menu at the top and choose **Testnet**.
4. Copy your address (it starts with `G`) and open this link in a new tab, replacing `YOUR_ADDRESS`: `https://friendbot.stellar.org/?addr=YOUR_ADDRESS`

- [ ] Freighter shows **Testnet** at the top, and a balance of 10,000 XLM.

2 Deploy the Shop flow

1. Open your **Shop** flow and click `DEPLOY`, then `DEPLOY TO TESTNET` on the review page.
2. Choose **Freighter** in the wallet picker. Freighter pops up — check it says testnet and shows your intended account, then **sign**.

- [ ] A “Contract deployed” message appears and you're taken to the deployment page.
- [ ] Within about a minute the status becomes **ACTIVE** and a QR code appears.

3 Pay it once, and send us the link

1. On the deployment page, click `OPEN TRIGGER PAGE`.
2. Enter **10** as the amount, click `CONFIRM AMOUNT`, then `CONNECT WALLET & TRIGGER`, choose **Freighter** in the wallet picker and sign.
3. Go back to the deployment page and watch the live feed.
   - [ ] The live feed shows one RECEIVE row and two PAYOUT rows: 6 XLM and 4 XLM.

   `SHOT` `bonus-live-feed` — the feed showing all three rows. Add it to the same folder.
4. Reply to the message this guide came in with the address of your **deployment page**. That link, plus `bonus-live-feed` in your folder, makes you eligible for the extra **₱75**.

Already on our list: the trigger page can report a failure even though the payment went through — check the live feed first. Use Freighter in the wallet picker for this round; other available options are outside this test plan. **Lantern (not yet supported)** is unavailable. The live feed can lag up to a minute.
