Draw how money moves.

Drag. Drop. Deploy.

Turn a visual payment flow into Stellar smart contracts, signed with your own wallet.

Receive
XLM enters the flow

Swap
Soroswap converts it

Pay
USDC reaches a recipient

Mychal Andres B. Pejana / paiflow.xyz

One month. A stronger payment path.

01 Real token swaps

Soroswap router integration
Live quotes and slippage protection

02 Developer API

Execute the same deployed flow
Scoped access; caller signs

03 Clearer builder

Consistent inputs and field errors
Keyboard and mobile support

04 Verified end to end

Wallet + API on the same flow
Guides and transaction receipts

Sprint: 7 September–4 October 2026 / All four deliverables complete

Receive XLM. Swap. Pay USDC.

One deployed flow. One wallet-signed execution.

Receive

10 XLM

→

Swap

XLM → USDC

→

Pay

Recipient wallet

Live quote → Wallet signature → Payout events → Explorer receipt

Your wallet signs. Contracts execute the swap and payment together.

Where we are. What comes next.

Grow usage through October’s planned builder events.

METRIC	BASELINE		BY 31 OCT	NEW ACTIVITY
Users onboarded	9	→	45+	+36
Flow deployments	42	→	110+	+68
Unique flows designed	25	→	60+	+35
Signed transactions	73	→	190+	+117
Signing wallets	17	→	45+	+28
Sandbox tries	8	→	60+	+52

9 active alpha testers: 8 external + 1 project member. 7 swap flows executed.

Forecast minimums, not results. Baseline: alpha 30 Sep; sandbox browsers 1 Oct.

Bring Paiflow to more builders.

University hackathon

Up to 10 teams building with Paiflow

Weekly builder sessions

Onboard and build after the hackathon

BlockQuest Fiesta PH

Hands-on Paiflow booth in Laguna

University event in Aklan

In planning · date to be confirmed

Draw the flow. Sign it. Watch the payment land.
