Paiflow × «EVENT_PARTNER» — Event Primer

Template for review · «UPDATED_DATE» · «VERSION»

Build an app that solves a real problem with automated payments through Paiflow. Your app handles the customer experience; your flow handles when money moves and where it goes. «EVENT_THEME_OR_OPEN_CHALLENGE»

01 At a glance

Item	Details
Date and time	«EVENT_DATE» · «START_TIME»–«END_TIME» · «TIMEZONE»
Venue or online access	«VENUE_AND_ROOM_OR_MEETING_LINK»
Format and eligibility	«IN_PERSON_ONLINE_OR_HYBRID» · «WHO_CAN_JOIN»
Teams	«MAX_TEAMS» teams · «MIN_TEAM_SIZE»–«MAX_TEAM_SIZE» people
Registration deadline	«REGISTRATION_DEADLINE_WITH_TIMEZONE»
Submission deadline	«SUBMISSION_DEADLINE_WITH_TIMEZONE»
Prize pool	«CURRENCY_AND_TOTAL_OR_NO_PRIZES»
Network	Stellar testnet; testnet funds have no real-money value

02 Preparation and integration timeline

Before the event — plan: choose a problem, sketch your app and register by «REGISTRATION_DEADLINE_WITH_TIMEZONE».

Before the event — prepare and integrate: set up wallets and testnet funds using the Paiflow guide. USDC needs its exact trustline and separate funding; Friendbot supplies XLM only. «EARLY_DEPLOYMENT_API_INTEGRATION_AND_TEST_PAYMENT_POLICY».

During the event — finish and demonstrate: use «EVENT_BUILD_WINDOW_WITH_TIMEZONE» to complete integration, verify a payout, collect evidence and prepare your pitch. Early preparation does not replace the qualifying payout requirement below.

Qualifying payout window: «EARLIEST_AND_LATEST_QUALIFYING_PAYOUT_TIMES_WITH_TIMEZONE». «WHETHER_PRE_EVENT_DEPLOYMENTS_AND_PAYOUTS_QUALIFY». Shared-demo and sandbox payouts do not establish your team's integration.

Submission deadline: «SUBMISSION_DEADLINE_WITH_TIMEZONE» via «SUBMISSION_URL». Submit your evidence on time, even if app polishing continues. «LATE_SUBMISSION_AND_TECHNICAL_FAILURE_POLICY».

03 Event program

Prepare before the event, use the event's build sessions to finish and demonstrate your app, then submit before the deadline. The preparation timeline above states what is permitted early and when a payout counts for qualification.

The schedule lists event-day activities. All preparation permissions and qualifying evidence dates must be read together with that schedule.

Hackathon schedule

All times are in **«TIMEZONE»**. «BREAK_AND_REMOTE_ATTENDANCE_DETAILS»

Time	Activity	What happens
«CHECK_IN_START_END»	**Check-in and briefing**	Confirm attendance, rules and support access
«BUILD_SESSION_1_START_END»	**Build and integration**	Work toward a confirmed payout
«BREAK_START_END»	**Break**	«BREAK_PROVISIONS_AND_OPTIONAL_CODING_RULE»
«BUILD_SESSION_2_START_END»	**Build and integration**	Finish the app and prepare evidence
«SUBMISSION_WINDOW»	**Submission**	Submit by «SUBMISSION_DEADLINE»; «OVERLAP_WITH_BUILD_SESSION»
«PITCHING_START_END»	**Pitching**	«TEAM_COUNT» × «MINUTES_PER_TEAM» minutes, plus «TRANSITION_AND_BUFFER_MINUTES» minutes
«JUDGING_START_END»	**Judging**	Verify evidence and finalise scores
«AWARDS_AND_CLOSING_START_END»	**Awards and closing**	Announce results and next steps

04 The challenge

Build for a real user. «THEME_CONSTRAINTS_OR_OPEN_THEME». Explain the problem, why your flow fits it and how your app makes the payment useful.

Paiflow turns a visual flow into Stellar smart contracts. One deployment can serve a business or group and accept payments from multiple customers. The SDK and HTTP integration API operate existing deployments; they do not create a separate deployment for every app user.

Idea	What it does	Paiflow pieces
Shared checkout	Split each sale between a shop and a partner	On Receive → Split
Creator tip jar	Share tips among collaborators	On Receive → Split
Event tickets	Route ticket payments to a configured recipient	On Receive → Pay
Donation drive	Share donations and show confirmed payouts	On Receive → Split, public activity

Feature availability: «APPROVED_FEATURES_AND_EXCLUSIONS_FOR_THIS_EVENT». Use standard flows with recipients configured before deployment as the baseline. Dev mode, per-payment recipients and advanced automation must not be assumed available.

Configure the recipients and asset for your team's deployment, then connect your app through the starter, SDK or HTTP API. Use your own team deployment for qualifying evidence.

Never store customer wallet secret keys in your app. Keep deployment API tokens and webhook secrets on your server. Each customer authorises their payment in their own wallet.

Explain who pays, what triggers the flow and who receives the payout. Show the confirmed outcome in your demo and retain its transaction hash.

For Node integrations, the published `@paiflow/sdk@0.2.0` beta provides typed calls. Direct HTTP APIs remain available. Read the developer docs and check the event deployment's capabilities and live state; package support alone does not establish feature readiness.

Before choosing an advanced idea: ask «TECHNICAL_SUPPORT_CHANNEL» about supported assets, fees, scheduled payouts, recurring charges or callbacks. Unattended scheduling and low fees must not be promised from SDK test coverage.

05 Prizes

Qualification: «CONFIRMED_TEAM_DEPLOYMENT_AND_VERIFIABLE_PAYOUT_REQUIREMENTS». Apply the evidence window above. «NON_QUALIFYING_TEAM_PITCH_AND_PRIZE_POLICY»

Public judging criteria: «CRITERIA_WEIGHTS_AND_DESCRIPTIONS_TOTAL_100_PERCENT». Publish any live-versus-recorded demo scoring difference here: «DEMO_SCORING_POLICY». Full internal judge instructions must apply these published rules.

Pitch format: «PITCH_AND_DEMO_MINUTES» minutes plus «QA_MINUTES» minutes for questions. «ORDER_TIMER_SETUP_AND_FALLBACK_RECORDING_RULES»

Awards: «AWARD_NAMES_AMOUNTS_AND_ELIGIBILITY». «MULTIPLE_AWARD_RULE_AND_TOO_FEW_QUALIFYING_TEAMS_POLICY». «TIE_BREAK_RULE». «PRIZE_DELIVERY_METHOD_AND_TIMING»

06 Event support and coordination

Submission checklist

Submit at **«SUBMISSION_URL»** by **«DEADLINE_AND_TIMEZONE»**: team details, project summary, «SOURCE_OR_DEMO_LINKS», deployment ID, payout transaction hash and «DEMO_REQUIREMENTS». «PAYOUT_EVIDENCE_REQUIREMENTS». Never submit tokens, private keys or signed envelopes.

Resources and support

Resource	Link or contact
Registration and submission	«REGISTRATION_URL» · «SUBMISSION_URL»
Paiflow app and setup guide	«APP_URL» · «PAIFLOW_GUIDE_URL»
SDK and HTTP API docs	«SDK_README_URL» · «API_README_URL»; API includes OpenAPI and Postman
Starter repository	«STARTER_URL»
Sample applications	«SAMPLE_SOURCE_AND_DEMO_URLS»
Tutorials and AI context	«TUTORIAL_URL» · «AI_CONTEXT_URL»
Support and announcements	«SUPPORT_CONTACT_AND_AVAILABILITY»

What to prepare and bring

Bring «EQUIPMENT_INTERNET_AND_POWER_REQUIREMENTS». Install the versions listed in the starter's current instructions and prepare a GitHub account and supported testnet wallet. «MEALS_ACCESSIBILITY_AND_VENUE_OR_REMOTE_PROVISIONS»

Shared rules: use Paiflow for the core payment flow; use testnet only. «AI_OPEN_SOURCE_AND_EXISTING_WORK_DISCLOSURE_POLICY». No API or relayer load-testing or spam. «CONDUCT_PRIVACY_RECORDING_AND_DISPUTE_CONTACT». «HOW_RULE_CHANGES_WILL_BE_ANNOUNCED»
