Paiflow Aklan Hackathon Event Primer

Updated October 17, 2026

Build an app that solves a real problem with automated payments through Paiflow. Teams can start building as soon as they receive this document. Use October 20 to finish your integration, demonstrate your app and show how its payment flow works.

01 At a glance

Item	Details
Date	October 20, 2026
Time	10:30 AM–6:00 PM Philippine Time (PHT)
Location	Aklan
Teams	10 teams
Event building session	1:00–4:00 PM; early building is allowed
Prize pool	PHP 10,000
Network	Stellar testnet; testnet funds have no real-money value

02 Preparation and integration timeline

As soon as you receive this document: choose a problem, sketch your app and start building. Prepare your wallets, deploy your flow, integrate Paiflow and test payments before the event. Ask the organisers for access if your team needs it.

Before October 20: follow the Paiflow Guide for wallet setup, testnet funding and integration. Use your team's own deployment when testing your app. Keep the deployment ID and transaction hashes so you can find and explain your payment results during the demo.

On October 20: attend the opening Paiflow session, then use the afternoon building session to finish integration, verify payouts and prepare your pitch. Pitching starts at **4:00 PM PHT**.

03 Event program

All times are in **Philippine Time (PHT)** on **October 20, 2026**.

Hackathon schedule

Time	Activity	What happens
10:30 AM–12:00 PM	**Paiflow and hackathon session**	Introduction to Paiflow and the hackathon
12:00–1:00 PM	**Break**	Pause before the afternoon building session
1:00–4:00 PM	**Hackathon building**	Finish your app, test the payment flow and prepare your demo
4:00–5:00 PM	**Pitching**	Teams present their projects and demos
5:00–5:30 PM	**Judging**	Judges deliberate
5:30–5:45 PM	**Announcement of winners**	Announce the winning teams
5:45–6:00 PM	**Closing**	Closing remarks

04 The challenge

Build for a real user. Explain who pays, why they pay and who receives the money. Your app handles the customer experience; your Paiflow flow handles when money moves and where it goes.

One deployment can serve a business or group and accept payments from multiple customers. The SDK and HTTP API operate existing deployments; they do not create a new deployment for every customer.

Idea	What it does	Paiflow pieces
Shared checkout	Split each sale between a shop and a partner	On Receive → Split
Creator tip jar	Share tips among collaborators	On Receive → Split
Event tickets	Route ticket payments to a configured recipient	On Receive → Pay
Donation drive	Share donations among configured beneficiaries	On Receive → Split

Use the SDK payment starter as a minimal integration example, then adapt it to your own app. It starts with a fixed 1 XLM payment to a testnet Receive deployment. The Paiflow Guide explains the setup; the SDK and HTTP API references provide detailed integration instructions.

For your demo, explain the problem, show the customer payment experience and show the confirmed payout to the intended recipients. Keep the transaction hash available so the result can be checked.

Pitching requirements and format

> Prepare a **pitch deck**. Each team has **four minutes for the presentation and demo, followed by two minutes for Q&A**.

Follow this order:

1. **Problem:** briefly describe the intended user and their problem. Keep claims specific and proportionate; do not overstate the problem.
2. **Solution:** explain what your app does and how it addresses the problem.
3. **Impact on Stellar:** explain how your app uses the Stellar blockchain and what useful activity or adoption it could bring. Distinguish demonstrated results from future potential.
4. **Paiflow integration:** show your flow and explain its role in the app.
5. **Demo:** show the customer experience, payment and confirmed payout.

> Keep the deck concise enough to leave time for the demo within your four minutes. The 10 team slots fill the **4:00–5:00 PM PHT** pitching session, so have your deck and app ready before your turn and start promptly.

05 Prizes

The total prize pool is **PHP 10,000**. Winners will be announced from **5:30–5:45 PM PHT**.

06 Event support and coordination

Resources and support

Resource	Link
Paiflow app	Open the beta app
Wallet, flow and app setup	Paiflow Guide
SDK integration	SDK README · Method and type reference
HTTP integration	HTTP API README, including OpenAPI and Postman resources
SDK payment example	Hackathon starter
Sample application	Campus Snacks source
AI context	Shared developer context

Ask the event organisers for setup help and event coordination.

What to prepare and bring

Prepare a laptop, charger, GitHub account and supported testnet wallet. Follow the Paiflow Guide and starter instructions for Node.js, pnpm, Git and Freighter setup. Arrange internet access for development, wallet signing and transaction checks.

Fund your wallets before testing. Friendbot supplies testnet XLM only; USDC requires its exact trustline and separate testnet funding.

Use Paiflow for your app's core payment flow and use testnet only. Each customer authorises their payment in their own wallet. Keep API tokens and webhook secrets on your server. Never store customer wallet secret keys in your app or include credentials in screenshots or demos. No API or relayer load-testing or spam.
